

Kentucky Sustainable Energy Alliance

www.kysea.org

KySEA, an alliance of businesses, nonprofit organizations, faith communities and individuals, has come together to work towards a new energy future for Kentucky. KySEA promotes

clean, sustainable and affordable energy solutions.

KySEA Energy Policy Principles

Workers installing solar panels in Lewis County

Make improving **energy efficiency** our top energy priority.

Promote the production of **clean, renewable energy** and increase the share of our energy that comes from it.

Create **new jobs** and opportunities in the clean energy sector.

Enable all residents and businesses to take advantage of these energy solutions.

KySEA Energy Policy Goals

Pass sound state energy policies in the 2010 state legislature.

In 2010, Kentucky should pass legislation that establishes a renewable and efficiency portfolio standard and feed-in tariffs for in-state renewable energy production.

Visit www.kysea.org to learn how these policies have succeeded in other states.

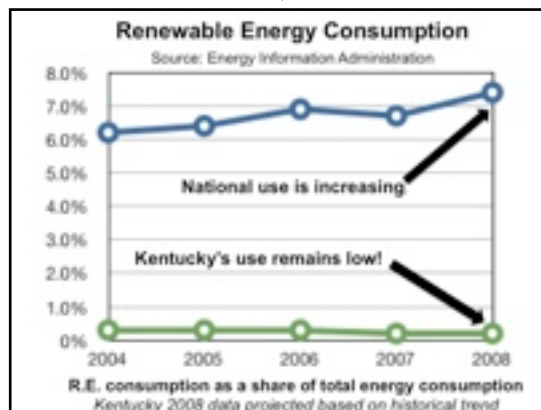

2020 Goal - Energy Efficiency

Offset 10.25% of statewide cumulative electricity use through new energy efficiency savings by 2020.

2020 Goal - Renewable Energy

Increase Kentucky's use of clean, renewable electricity sources from 1.7% in 2007 to 12.5% in 2020.

The number one state energy priority identified by the largest number of Kentucky residents in a 2008 public survey was "transitioning to renewable energy sources."
(Opinion Resource Corporation poll)

Kentuckians are ready for clean and stable energy sources. KySEA is working to make these energy possibilities a reality.

To join KySEA as an organization or an individual, contact Martin at (859) 986-1277 or martin@kysea.org.

Kentucky Sustainable Energy Alliance

KySEA - www.kysea.org

Passing KySEA energy policy solutions will benefit *all* Kentuckians by...

Encouraging entrepreneurship and local job growth, ensuring that Kentucky is regionally competitive in the clean energy market.

Protecting Kentucky families and businesses from economic risk.

Helping Kentucky families and businesses to save energy and money.

Building on Kentucky's clean energy momentum.

Reducing harm to our health and environment.

Creating the incentives necessary for utilities to invest in energy efficiency and clean renewable sources – and holding them accountable for meeting modest goals.
